

The institute aims at promoting the harmonious and integral development of each student as a person and future citizen, aware and responsible in society. To achieve these goals, the Institute places its educational actions in continuity and complementarity with the experiences that the student makes in the various areas of life, culturally mediating them through the curriculum and placing them in an educational development perspective.

The teaching practices implemented for the harmonious and integral development of each student concern mainly:

- Continuity and orientation
- Integration and inclusion
- Raising of education levels and skills
- Equal opportunities for academic success and training for each student

The curriculum takes into account the real needs of pupils and the following aspects of

- teaching /learning:
- dynamic /relational
- motivational/ procedural
- active / constructive

All these aspects and practices understood in a flexible way to form the profile of an independent and responsible student
